

DIGITAL LITERACY PROJECT REPORT

Name: Sajid Ali

Registration Number: 25BCE10964

Branch: B.Tech Computer Science Engineering

Year: First Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 31/03/26

Introduction

In today's fast-growing digital world, digital literacy has become an essential skill for students to succeed academically and professionally. As a Student Digital Ambassador, this project provided an opportunity to explore various aspects of digital tools, online communication, and cybersecurity awareness. The project included creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness. Each task helped in developing practical knowledge and responsible digital behavior. Through this project, I learned how to present information visually, maintain a professional online presence, and communicate effectively in a digital environment. It also increased my awareness about online threats and safety practices. Overall, this project was a valuable learning experience that improved my technical knowledge and confidence in using digital technologies responsibly.

Task 1: Digital Literacy Infographic

I used Canva to design a digital literacy awareness infographic. The infographic focused on key topics such as digital literacy, safe internet practices, and useful tools for students. It included visuals, icons, and short explanations to make the content easy to understand. I highlighted tools like Google Workspace, GitHub, and LinkedIn, along with safety tips such as using strong passwords and avoiding suspicious links. While working on this task, I explored different templates and design options available in Canva. One challenge I faced was organizing all the information clearly on a single page without making it look crowded. I solved this by using proper spacing and headings. This task improved my creativity and helped me understand how visual communication can effectively spread awareness among students.

Task 2: Student Digital Portfolio

I created profiles on GitHub, LinkedIn, and Kaggle to build my digital portfolio. GitHub is useful for sharing coding projects, LinkedIn helps in

professional networking, and Kaggle supports skill development in coding and data-related areas. On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my education information. These platforms will help me build a strong professional identity over the next four years. I plan to regularly upload projects, participate in challenges, and connect with professionals. This task helped me understand the importance of maintaining a digital presence and how it can support career opportunities such as internships and placements in the future.

Task 3: Coding & Collaboration Platforms

I used HackerRank to practice coding and completed a beginner-level problem, which helped improve my logical thinking and problem-solving skills. It was a good introduction to programming challenges. I also created a Google Form with five questions related to digital literacy awareness. The form included multiple-choice and short-answer questions and was linked to Google Sheets for collecting responses. This activity helped me understand how to gather and analyze data efficiently. Coding platforms help improve programming skills, while collaboration tools make it easier to work with data and conduct surveys. Overall, this task improved my technical abilities and showed how digital platforms can be effectively used for academic learning.

Task 4: Email Etiquette & Communication

Effective communication is very important in the digital world. Poorly written emails can create misunderstandings and leave a negative impression. For example, sending an email without a proper subject line or respectful tone may lead to confusion or being ignored. Using a clear subject line, polite language, and proper structure ensures that the message is understood correctly. Addressing the recipient properly and ending with a professional sign-off are also important. This task helped me understand how to write professional emails and communicate responsibly. It improved my communication skills and showed the importance of maintaining a respectful tone in academic and professional environments.

Task 5: Cybercrime Awareness

During this task, I learned about cybercrimes such as phishing and online fraud, which are becoming very common. These crimes often use fake messages or websites to steal personal or financial information. I was surprised by how easily people can be targeted if they are not careful. This task helped me understand the importance of being alert while using the internet. I will always verify links before clicking and avoid sharing sensitive information online. I will also check website security before entering personal details. This task increased my awareness about online safety and the importance of following secure digital practices.

Conclusion

This project helped me understand digital literacy and its importance in today's world. I learned how to create visual content, build a professional online presence, use digital tools, communicate effectively, and stay safe online. Each task contributed to developing important skills required in the digital age. The project also increased my confidence in using online platforms responsibly. I realized that digital literacy is not only about using technology but also about using it safely and effectively. These skills will be helpful throughout my academic journey and future career. Overall, this project was a valuable experience that improved my knowledge and awareness of digital technologies.
